SPEEDTURF 58™ Non-Infill, Multi-Sport Artificial Turf

Looking for the best speed/agility training turf that is not abrasive?

Our Speedturf 58 is a premium padded turf system made of durable nylon, perfect for arenas, speed/agility training and field applications. Manufactured for maximum resistance to wear using fibers and yarns that look and feel like genuine grass, which makes our turf especially suitable for all multi-sports field applications. The tall fibers and short yarn which makes a thatch zone eliminates the need for rubber or sand infill. Speedturf 58 can be manufactured with a white line tufted in on one side of the turf that runs parallel with the length of the roll, eliminating the need for painted lines.

Materials

PILE WEIGHT	58 OZ
